Introduction to Visa SRC

Visa SRC is Visa's solution for e-commerce payments based upon the EMV[®] Secure Remote Commerce (EMV SRC) standards and specifications. With EMV SRC, a single payment profile can be used with a variety of consumer devices and participating online merchants. The standards include a common payment icon and user experience for card-based digital transactions, support for cardholder verification methods, and a common data payload built on primary account numbers (PANs) and the ability to support network tokens.

**Note**

Visa Checkout will be visible to customers outside of the United States until all countries have made the transition to Visa SRC.

Visa SRC is supported with the CyberSource Simple Order API, CyberSource SCMP API, and Secure Acceptance.

How Visa SRC and CyberSource Work Together

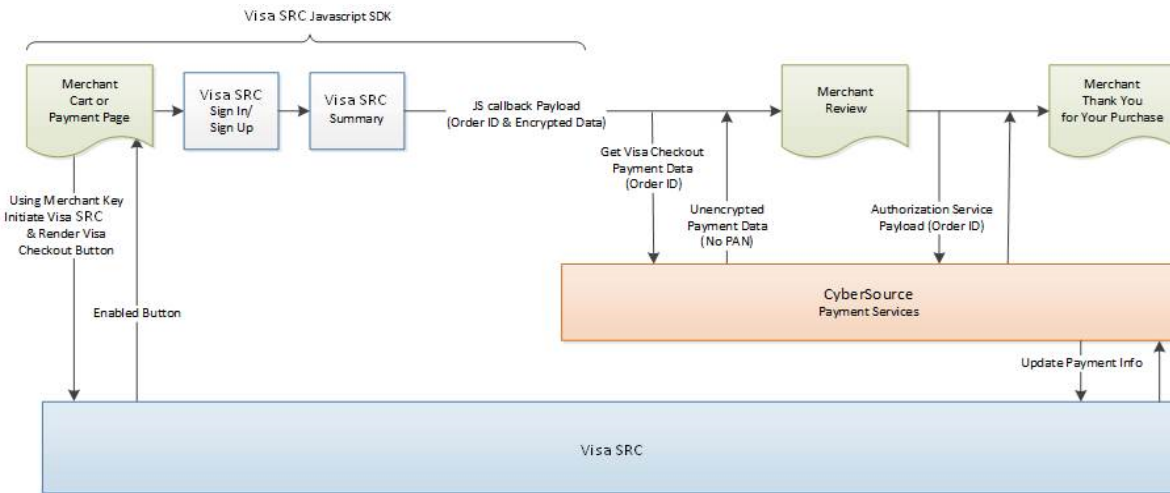

**Note**

Visa SRC uses Visa Checkout services, Business Center labels, and API fields.

CyberSource provides the following services to assist with your Visa SRC integration:

- **Get Visa Checkout data:** this service retrieves Visa SRC data, which enables you to display payment and shipping details to the customer during checkout.
- **Authorization:** this service enables you to send an authorization request to your processor using Visa SRC payment data.

Visa SRC Flow

- 1 Your web site integrates directly with Visa SRC to display the Visa SRC button on your checkout page.
- 2 CyberSource provides the get Visa Checkout data service, which retrieves Visa SRC payment data (except the PAN, unless your account is configured to receive it). You can use the retrieved data to help a customer confirm a purchase.
- 3 You submit an authorization request to CyberSource for credit card processing. Instead of including payment information in the authorization request, you include the Visa SRC order ID.
- 4 At various points in the transaction cycle, you notify the customer of the transaction status.

Supported Countries

Enrollment

Visa SRC merchant enrollment is available in the United States of America.

Payments and Currency

For a list of the countries and currencies from which Visa SRC payments are accepted, refer to [Appendix A, "Supported Countries, Regions, and Payment Currencies,"](#) on page 16.

Integrating Visa SRC and CyberSource Credit Card Services

Enabling Visa SRC

**Note**

The CyberSource Simple Order API, CyberSource SCMP API, and Secure Acceptance support Visa SRC.

**Note**

To enroll yourself, you must have administrator privileges for your CyberSource account in the Business Center.

You must enable Visa SRC in the CyberSource production environment for production access. You can enable Visa SRC yourself if you already have a CyberSource account. If not, contact your local CyberSource sales representative.

To enable in Visa SRC:

- Step 1** Log in to the Business Center.
- Step 2** On the left navigation pane, click the **Payment Configuration** icon.
- Step 3** Click **Digital Payment Solutions**. The Digital Payments page appears.
- Step 4** Click **Configure**. The Visa Merchant Services Agreement appears.
- Step 5** Review the Visa Checkout Services Agreement, and click **Agree and Create Account**. The Visa Checkout Configuration panel opens to the Merchant Configuration section.

**Note**

Visa SRC uses Visa Checkout services, Business Center labels, and API fields.

- Step 6** Enter your payment details, and then click **Submit**.
-

If you do not already have a CyberSource account, contact your local CyberSource Sales representative to inquire about Visa SRC eligibility and enrollment:

<http://www.cybersource.com/locations/>

During Visa SRC enrollment, you can choose to receive primary account number (PAN) data. You must agree to handle the PAN data in compliance with the Payment Card Industry Data Security Standard (PCI-DSS).

During Visa SRC enrollment, Visa SRC issues a Visa SRC production API key to you that you will use to communicate with Visa SRC. CyberSource stores a copy of this key in the Business Center.

You must keep your own copy of the Visa SRC production API key in a safe place. You are responsible for maintaining adequate security and control of your Visa SRC production API key.

Creating and Updating Visa SRC Profiles

Visa SRC profiles enable you to control the card types and shipping options in the Visa SRC light box that your customers use during checkout. Visa SRC profiles are supported when you use the Simple Order API, SCMP API, or Secure Acceptance Hosted Checkout to implement the Visa SRC button and connect to Visa SRC.

Creating and using Visa SRC profiles is optional. You can create up to 100 Visa SRC profiles for one web site URL associated with a Visa SRC account. You can specify any Visa SRC profile as the default profile, but you can have only one default profile at a time. You can create, update, and delete Visa SRC profiles in real time.

When you create or edit a Visa SRC profile, the available card types depend on the country in which you are located. You can associate the following shipping options with a profile:

- Shipping is not required
- Products can be shipped to specific regions

For additional information about working with Visa SRC profiles, see *Getting Started with Visa SRC* (version published by Visa) and the *Visa SRC JavaScript Integration Guide*.

You must enroll in Visa SRC before you can create and update Visa SRC profiles.

To create a Visa SRC profile:

- Step 1** Log in to the Business Center.
- Step 2** On the left navigation pane, click the **Payment Configuration** icon.
- Step 3** Click **Digital Payment Solutions**. The Digital Payments page appears.

Note

Visa SRC uses Visa Checkout services, Business Center labels, and API fields.

- Step 4** Click **Manage Profiles**. The Manage Profiles panel opens.
- Step 5** Click **New Profile**. The New Profile Configuration panel opens.
- Step 6** Enter the profile name and select billing countries. Enter other details as necessary.

Table 1 Visa SRC Profile Details

Profile Detail	Description
Profile Name	The Visa SRC profile name is required, must be unique for each profile, and cannot exceed 50 alphanumeric characters.
Logo URL	The logo URL for the profile should be a valid URL and cannot exceed 100 characters.
Referring URL	The referring URL for the profile should be a valid URL and cannot exceed 100 characters.
Customer Support URL	The customer support URL for the profile should be a valid URL and cannot exceed 100 characters.
Logo Display Name	The logo display name cannot exceed 100 alphanumeric characters.
Default Profile	Check Make this the Default Profile for a profile to make it the default profile. Only one profile can be chosen as the default profile.
Accepted Cards	Select the accepted card types (Visa, Mastercard, American Express, Discover) for the profile. Note A selection for the Visa Debit card type displays as an accepted card type after you select the Visa card type and only when your business is located in Canada. If you want to select only the Visa card type, deselect the Visa Debit card type. The Visa card type remains selected.
Billing Countries	Click the pencil icon to specify the countries from which you accept payments. At least one billing country must be specified.
Shipping Countries	Click the pencil icon to specify the countries to which merchandise can be shipped. Note If you do not specify a shipping country, the shipping address is not required by Visa SRC.

Step 7 Click **Save Profile**.

To edit or delete a Visa SRC profile:

Step 1 Log in to the Business Center.

Step 2 On the left navigation pane, click the **Payment Configuration** icon.

Step 3 Click **Digital Payment Solutions**. The Digital Payments page appears.

Note

Visa SRC uses Visa Checkout services, Business Center labels, and API fields.

Step 4 On the Digital Payments page, click **Manage Profiles**. The Manage Profiles panel opens.

- To edit a profile, click the **Edit** icon, edit the profile, and click **Save Profile**.
 - To delete a profile, click the **Delete** icon next to the profile you want to delete.
-

Using 3D Secure with Visa SRC

Payer authentication is the CyberSource implementation of 3D Secure.

Adding CyberSource Payer Authentication to Visa SRC Using the Simple Order API or SCMP API

For Visa SRC, CyberSource supports the following kinds of payer authentication:

- American Express SafeKey
- Mastercard Identity Check
- Visa Secure

To integrate payer authentication using the Simple Order API or SCMP API, see:

- [Credit Card Services Using the Simple Order API](#) or [Credit Card Services Using the SCMP API](#)
- [Payer Authentication Using the Simple Order API](#) or [Payer Authentication Using the SCMP API](#)

With Visa SRC, you must include the payer authentication enrollment service and the credit card authorization service in the same request message in order to decrypt the primary account number (PAN) and complete the rest of the payer authentication flow. When you submit a separate request message for each service, the payer authentication enrollment service request fails.

Adding CyberSource Payer Authentication to Visa SRC Using Secure Acceptance

For Visa SRC, CyberSource supports the following kinds of payer authentication:

- American Express SafeKey
- Mastercard Identity Check
- Visa Secure

To integrate payer authentication using Secure Acceptance Hosted Checkout, see the [Secure Acceptance Hosted Checkout Integration Guide](#).

Working with Visa Secure

Visa SRC provides Visa Secure, and CyberSource supports it with the Simple Order API, SCMP API, and Secure Acceptance.

Contact your CyberSource account manager or sales representative to have Visa Secure added to your Visa SRC account.

Visa SRC pays the fees for Visa Secure.

Using Decision Manager with Visa SRC

While the Visa SRC response contains many of the fields necessary to run Decision Manager, it does not include these essential Decision Manager fields:

- Device fingerprint
- True IP address

You must capture these fields independently.

Updating Your Software

**Note**

Visa SRC uses Visa Checkout services, Business Center labels, and API fields.

To update your software:

- Step 1** Display the Visa SRC button on your web site. Implement JavaScript for handling the actions associated with the button. You can choose to create Visa SRC profiles as described in "[Creating and Updating Visa SRC Profiles](#)," page 10. For more information about this step, see *Getting Started with Visa SRC* (version published by Visa) and the *Visa SRC JavaScript Integration Guide*.
 - Step 2** Obtain the encrypted Visa SRC payment data.
 - Step 3** Request the CyberSource get Visa Checkout data service. You can use the decrypted data to help the customer confirm the purchase. However, you cannot use the PAN unless your account is configured to receive it. See [Visa Secure Remote Commerce Using the Simple Order API](#) or [Visa Secure Remote Commerce Using the SCMP API](#).
 - Step 4** Request the CyberSource authorization service. See [Credit Card Services Using the Simple Order API](#) or [Credit Card Services Using the SCMP API](#).
 - Step 5** After payment is complete, notify the customer of the updated transaction status.
-

Testing Your Implementation

**Note**

Visa SRC uses Visa Checkout services, Business Center labels, and API fields.

To test your implementation:

- Step 1** Test your implementation of the CyberSource services.

Use the CyberSource test environment to test the get Visa Checkout data service and authorization service. If you do not already have access to the CyberSource test environment, contact your CyberSource sales representative.

When you have access to the CyberSource test environment, go to the Business Center to enroll in Visa SRC again as described in "[Enabling Visa SRC](#)," page 9, but make sure

that you enroll in the test environment and not the production environment. The CyberSource test environment approves your merchant account and provides you with a Visa SRC testing API key for the CyberSource test environment and the Visa SRC merchant sandbox environment.

Step 2 Test your implementation of Visa SRC.

Use the Visa SRC merchant sandbox to test your direct integration to Visa SRC. To connect to the sandbox, use the Visa SRC testing API key that you received when you enrolled in Visa SRC through the CyberSource test environment. See the following documents for information about connecting to the Visa SRC sandbox:

- *Getting Started with Visa SRC* (version published by Visa)
- *Visa SRC JavaScript Integration Guide*

To obtain these documents, see "[Visa Secure Remote Commerce Documents](#)," page 6.

Obtaining Information About Your Transactions

The following CyberSource reports include information about Visa SRC transactions:

- Payment Batch Detail
- Transaction Exception Detail
- Purchase and Refund Details

For information about these reports, see the [Business Center Reporting User Guide](#).

Supported Countries, Regions, and Payment Currencies

The following table identifies the countries, regions, and associated currencies from which payments are accepted:

Country or Region	Currency	Code
Argentina	Argentine peso	ARS
Australia	Australian dollar	AUD
Brazil	Brazilian real	BRL
Canada	Canadian dollar	CAD
Chile	Chilean peso	CLP
China Mainland	Chinese yuan renminbi	CNY
Colombia	Columbian peso	COP
France	Euro	EUR
Hong Kong	Hong Kong dollar	HKD
India	Indian rupee	INR
Ireland	Euro	EUR
Kuwait	Kuwaiti dinar	KWD
Malaysia	Malaysian ringgit	MYR
Mexico	Mexican peso	MXN
New Zealand	New Zealand dollar	NZD
Peru	Peruvian nuevo sol	PEN
Poland	Euro	EUR
Qatar	Qatari rial	QAR
Saudi Arabia	Saudi Arabian riyal	SAR
Singapore	Singapore dollar	SGD
South Africa	South African rand	ZAR
Spain	Euro	EUR
Ukraine	Ukrainian hryvnia	UAH
United Arab Emirates	United Arab Emirates dirham	AED
United Kingdom	British pound sterling	GBP
United States of America	United States dollar	USD
